1. Claims 2-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims contain Trademark, NITINOL. Applicants are requested to provide the true chemical name compound.

2

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1,5-14,18-22,24,27-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Xie et al(US 6503620) in view of Japanese reference 6-36613(Abstract). The primary reference teaches the basic claimed invention including an adhesive compound and a plurality of fillers/particles therein- col 2, line 41- col 3, line 4; col 4, lines 47-56; col 5, lines 47-57; col 6, lines 3-11; col 7. lines 31-46; col 16, line 55 – col 17, line 7. Although the reference teaches particles in its adhesive material, it fails to expressly teach that such particles are SMA. The secondary reference to Japanese 6-36613, teaches that it is known in the art to include sma particles in similar resin as taught by the primary reference- see abstract. It would have been obvious to one of ordinary skill in the art at the time the invention is made to combine the teaching of the secondary reference and include such particles in the primary reference motivated by the desire to impart desired characteristics to the adhesive resin. See the primary reference, col 7, lines 3-10. Concerning claims 5,20 and 27, the primary reference teaches shapes in col 7, lines 1-3. Concerning claims 7,8,18,19,28 and 29, the primary reference teaches similar sma amounts in col 5, lines 47-57. Concerning claims 11-13 and 24, the cited reference teaches similar claimed dimensions in col 6, lines 3-11. Concerning claims 6,14 and 21, the primary reference teaches similar particle disposition in its resin in col 7, lines 35-40. It is further submitted that the particles would indeed be also and randomly distributed in the resin by virtue of its incorporation therein in and in the absence

Art Unit: 1774

of unexpected results. Concerning claims 9, 10 and 22, the primary reference teaches adhesive film and paste material in col 8, lines 40-54; col 7, lines 41-46, respectively.

3

Claims 2,15 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Xie et al(US 6503620) and Japanese reference 6-36613(Abstract). as applied to claims 1,5-14,18-22,24,27-29 above, and further in view of Goldstein(US 4657822). The reference to Goldstein teaches it is known in the art to include NITINOL alloy particles in products as taught by the obvious combined teachings of the references as discussed above - col 4, line 35.

4

Claims 3,4,16,17,25 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over over Xie et al(US 6503620) and Japanese reference 6-36613(Abstract) as applied to claims 1,5-14,18-22,24,27-29 above, and further in view of Minners(US 6236300). The Minners patent teaches that it is well known in the art for sma material to exist in various phrases - col 3, lines 14-50; col 1, lines 34-42. The secondary reference accordingly teaches that it is known to attach material with SMA included therein to substrate in, with no adverse affects - col 6, lines 42-46.

5

Applicants who wish to send a facsimile (draft copies) for the examiner's immediate review can do so by using the Examiner's personal fax number at 571-273-1520. The faxing of all papers must conform with the notice published in the Official Gazette, 1096 O.G. 30 (November 15, 1989). **NOTE: All facsimiles sent to the examiner's**

Art Unit: 1774

personal fax number should be in draft-forms and will be treated as informal.

Same facsimiles will not be entered in the related applications unless

otherwise agreed and noted by the examiner.

The fax number for all other fascimile is 571-273-8300.

Information about the status of an application may be obtained from the Patent

Information Retrieval system (Private PAIR).

Status inquires for published applications may be retrieved from either Private PAIR

or Public PAIR. Questions about the PAIR system should be directed to the Electronic

Business Center at 866-217-9197.

Any questions concerning the instant communication should be directed to Examiner

Dixon, at 571-272-1520, Mondays, Wednesdays and Thursdays, between 12 noon and

8 PM, eastern time.
